

Renewal Visp station

The new built Lötschberg base line connects the North-South transversal line with the Simplon line in Visp. This makes Visp now to a major node in the network.

Besides railway specific elements the project includes also urban planning in the station surroundings.

Concerning railway infrastructure all facilities of SBB and MGBahn will be renewed.

The project includes engineering and realisation of track works, civil works (3 specific constructions), noise abatement walls, superstructure and in cooperation with our partners catenary, cableworks and electrical engineering. The project included co-ordination of railway equipment and scheduling of all works.

Ort

Visp (Switzerland)

Kunde
