

Railway Connection Voronezh – New International Airport

The consultancy services provided for MostGeoCenter Ltd dealt with the proposal of different variants of Light Railway Systems connections, a global study of exploitation settings, as well as a comparison with European models. The next step consisted in a more detailed investigation of a preferred scenario with focus on cost, revenues and time schedules, as a preparation to preliminary design. In parallel a cost-earning-analysis as basis for a PPP-realization has been done.

Ort

Russia
