

Olympic Games Sochi 2014 - Logistics

The mandate included the development and assessment (risk analysis) of the transport and logistic supply chains for goods to be delivered to the Greater Sochi by external transport modes. Additionally, practical proposals have been developed to establish a main center to manage and control the freight logistics system during the construction of the Olympic facilities (the logistics center - LC). Preliminary technical proposals on common information environment with one control centre and proposal on the passenger transportation centre have been given. Finally, proposals have been developed for distribution of powers and responsibilities per management level of the logistics system as well as organizational and financial mechanisms of LC interactions with shipping agencies and other participants of the transportation process.
